කෘෂි තාක්ෂණවේදය I விவசாயத் தொழினுட்பவியல் I Agro Technology I

சැக ¢දකයි இரண்டு மணித்தியாலம் Two hours

#### **Instructions:**

- \* Answer all questions.
- \* Write your Index Number in the space provided in the answer sheet.
- \* Instructions are given on the back of the answer sheet. Follow those carefully.
- \* In each of the questions 1 to 50, pick one of the alternatives from (1), (2), (3), (4), (5) which is correct or most appropriate and mark your response on the answer sheet with a cross (x) on the number of the correct option in accordance with the instructions given on the back of the answer sheet.
- 1. The major field of soft technology is
  - (1) Nanotechnology.

- (2) Biotechnology.
- (3) Industrial technology.
- (4) Food technology.
- (5) Information technology.
- 2. The major atmospheric pollutant that is generated from agricultural activities is
  - (1) CH<sub>4</sub>
- (2) CO<sub>2</sub>
- (3) NO,
- (4)  $N_2O$
- (5) CFC

Sty. Lanta

- 3. The basement of the food pyramid represents the required amount of
  - (1) fat for a balanced diet.
- (2) proteins for a balanced diet.
- (3) vitamins for a balanced diet.
- (4) minerals for a balanced diet.
- (5) carbohydrates for a balanced diet.
- 4. Select the correct formula that is used to calculate the Body Mass Index (BMI) of an individual.
  - (1) BMI =  $\frac{\text{Height of a person (cm)}}{[\text{Weight of the person (kg)}]^2}$
  - (2) BMI =  $\frac{\text{Height of a person (cm)}}{\text{Weight of the person (kg)}}$
  - (3) BMI =  $\frac{\text{Weight of a person (kg)}}{[\text{Height of the person (m)}]^2}$
  - (4) BMI =  $\frac{\text{Weight of a person (kg)}}{\text{Height of the person (m)}}$
  - (5) BMI =  $\frac{\text{Weight of a person (kg)}}{|\text{Height of the person (cm)}|^2}$
- 5. The macro nutrients in food mainly contribute to
  - (1) prevention from diseases.
- (2) successful reproduction.
- (3) growth and development.
- (4) maintaining a healthy body.
- (5) improve brain function.

A - Oxidation of lipids can be explained as a non-enzymatic process. B - Peroxides are the final products generated from lipid oxidation. C - Photo-oxidation of lipid can be controlled by using carotenoids. Of the above, the correct statement/s is/are (1) A only. (2) B only. (3) C only. (4) A and B only. (5) A and C only.  7. The non-organoleptic parameter which can change due to spoilage of food is (1) taste. (2) colour. (3) texture. (4) odour. (5) mineral of the security and food safety are best explained as, (1) accessibility of odd safety are best explained as, (1) accessibility of adequate food and food with moderate health hazards, respectively. (3) accessibility of adequate food and food with moderate health hazards, respectively. (4) availability of antitious food and adequate food, respectively. (5) availability of nutritious food and its ability to safeguard human health, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (8) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect (3) A is incorrect and B is correct. (4) A is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the full wind.  (2) rain. (3) insects. (4) frost. (5) direct su  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the	
C - Photo-oxidation of lipid can be controlled by using carotenoids.  Of the above, the correct statement/s is/are  (1) A only. (2) B only. (3) C only.  (4) A and B only. (5) A and C only.  7. The non-organoleptic parameter which can change due to spoilage of food is (1) taste. (2) colour. (3) texture. (4) odour. (5) mineral of taste. (1) accessibility of food with no health hazards and adequate food, respectively. (2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of antiritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively.  9. Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect (3) A is incorrect and B is incorrect (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the continuation of the seed	
C - Photo-oxidation of lipid can be controlled by using carotenoids.  Of the above, the correct statement/s is/are  (1) A only. (2) B only. (3) C only.  (4) A and B only. (5) A and C only.  7. The non-organoleptic parameter which can change due to spoilage of food is (1) taste. (2) colour. (3) texture. (4) odour. (5) mineral of taste. (1) accessibility of food with no health hazards and adequate food, respectively. (2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of antiritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively.  9. Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect (3) A is incorrect and B is incorrect (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the continuation of the seed	
Of the above, the correct statement/s is/are  (1) A only. (2) B only. (3) C only. (4) A and B only. (5) A and C only.  7. The non-organoleptic parameter which can change due to spoilage of food is (1) taste. (2) colour. (3) texture. (4) odour. (5) mineral of the non-organoleptic parameter which can change due to spoilage of food is (1) accessibility of food with no health hazards and adequate food, respectively. (2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility of non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (8) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect (3) A is incorrect and B is incorrect (4) A is correct and B is correct. (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the covered that the environmental parameter/s, which influence the soil genesis is/are (1) humidity. (2) rain. (3) insects. (4) frost. (5) direct su  11. The environmental parameter/s, which influence the soil genesis is/are (1) humidity and temperature. (5) rainfall and temperature. (6) rainfall and temperature. (7) rainfall and temperature. (8) rainfall and temperature. (9) Repetitively.	
(1) A only. (2) B only. (3) C only. (4) A and B only. (5) A and C only.  7. The non-organoleptic parameter which can change due to spoilage of food is (1) taste. (2) colour. (3) texture. (4) odour. (5) mineral of security and food safety are best explained as, (1) accessibility of food with no health hazards and adequate food, respectively. (3) accessibility of non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (7) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect. (3) A is incorrect and B is correct. (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the flumidity. (2) rain. (3) insects. (4) frost. (5) direct su (1) wind. (2) rain. (3) insects. (4) frost. (5) direct su (1) humidity. (2) temperature. (3) rainfall. (4) humidity and temperature. (5) rainfall and temperature.  12. Consider the following statements.  A - Seed dormancy would help seeds to overcome unfavourable conditions.  B - Scarification of passion fruit (Passiftora edulis) seeds helps removing seed de C - Mature viable	
(4) A and B only.  (5) A and C only.  7. The non-organoleptic parameter which can change due to spoilage of food is (1) taste.  (2) colour.  (3) texture.  (4) odour.  (5) mineral of taste.  (2) colour.  (3) texture.  (4) odour.  (5) mineral of taste.  (1) accessibility of food with no health hazards and adequate food, respectively.  (2) availability of adequate food and food with moderate health hazards, respectively.  (3) accessibility for non-hazardous food and adequate food, respectively.  (4) availability of nutritious food and its ability to safeguard human health, respectively.  (5) availability of adequate food with correct nutrition and no health hazards, respectively.  (6) availability of adequate food with correct nutrition and no health hazards, respectively.  (5) availability of adequate food with correct nutrition and no health hazards, respectively.  (6) availability of adequate food with correct nutrition and no health hazards, respectively.  (7) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above,  (1) Both A and B are correct.  (2) A is correct and B is incorrect.  (3) A is incorrect and B is correct.  (4) A is correct and B is correct.  (4) A is correct and B is correct.  (5) B is correct and it is further explained by B.  (6) B is correct and B is further explained by B.  (7) B is correct and B is correct.  (8) C is a further transplanting is to protect the seedlings after transplanting is to protect the flowing.  (9) Consider the following statements.  A - Seed dormaneter/s, which influence the soil genesis is/are  (1) humidity.  (2) temperature.  (3) rainfall.  (4) humidity and temperature.  (5) rainfall and temperature.  (6) rainfall and temperature.  (7) rainfall and temperature.  (8) Practical food is availability to safeguard human health, respectively.  (9) Practical food, respectively.  (1) A only.  (2) B only.	
<ol> <li>The non-organoleptic parameter which can change due to spoilage of food is         (1) taste. (2) colour. (3) texture. (4) odour. (5) mineral of taste. (2) colour. (3) texture. (4) odour. (5) mineral of taste. (2) colour. (3) texture. (4) odour. (5) mineral of taste. (2) availability of food with no health hazards and adequate food, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (8) availability of adequate food with correct nutrition and no health hazards, respectively. (9) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables. Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect. (3) A is incorrect and B is correct. (4) A is correct and B is further explained by B. (5) B is correct and B is further explained by B. (5) B is correct and B is correct. (4) A feature viable respectively.</li> <li>10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the fluority of the above, the correct statements. (3) insects. (4) frost. (5) direct surface and the purpose of providing cover for the seedlin</li></ol>	
8. Food security and food safety are best explained as, (1) accessibility of food with no health hazards and adequate food, respectively. (2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (7) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect. (3) A is incorrect and B is correct. (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the full wind. (2) rain. (3) insects. (4) frost. (5) direct sure full time influence the soil genesis is/are (1) humidity. (2) temperature. (3) rainfall.  A - Seed dormancy would help seeds to overcome unfavourable conditions.  B - Scarification of passion fruit (Passiflora edulis) seeds helps removing seed of C - Mature viable crop seeds have a dormancy period of more than 2 weeks.  Of the above, the correct statement/s is/are (1) A only. (2) B only. (3) C only.	
8. Food security and food safety are best explained as,  (1) accessibility of food with no health hazards and adequate food, respectively.  (2) availability of adequate food and food with moderate health hazards, respectively.  (3) accessibility for non-hazardous food and adequate food, respectively.  (4) availability of nutritious food and its ability to safeguard human health, respectively.  (5) availability of adequate food with correct nutrition and no health hazards, respectively.  (6) availability of adequate food with correct nutrition and no health hazards, respectively.  (7) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above,  (1) Both A and B are correct.  (2) A is correct and B is incorrect.  (3) A is incorrect and it is further explained by B.  (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the covered in the environmental parameter/s, which influence the soil genesis is/are  (1) wind.  (2) rain.  (3) insects.  (4) frost.  (5) direct su  11. The environmental parameter/s, which influence the soil genesis is/are  (1) humidity.  (2) temperature.  (3) rainfall.  (4) humidity and temperature.  (5) rainfall and temperature.  12. Consider the following statements.  A - Seed dormancy would help seeds to overcome unfavourable conditions.  B - Scarification of passion fruit (Passiflora edulis) seeds helps removing seed do C - Mature viable crop seeds have a dormancy period of more than 2 weeks.  Of the above, the correct statement/s is/are  (1) A only.  (2) B only.  (3) C only.	
(1) accessibility of food with no health hazards and adequate food, respectively. (2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (7) availability of adequate food with correct nutrition and no health hazards, respectively. (8) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect. (3) A is incorrect and B is correct. (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the (1) wind. (2) rain. (3) insects. (4) frost. (5) direct su  11. The environmental parameter/s, which influence the soil genesis is/are (1) humidity. (2) temperature. (3) rainfall. (4) humidity and temperature. (5) rainfall and temperature.  12. Consider the following statements.  A - Seed dormancy would help seeds to overcome unfavourable conditions.  B - Scarification of passion fruit (Passiflora edulis) seeds helps removing seed do C - Mature viable crop seeds have a dormancy period of more than 2 weeks.  Of the above, the correct statement/s is/are (1) A only. (2) B only. (3) C only.	content.
(1) accessibility of food with no health hazards and adequate food, respectively. (2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (7) availability of adequate food with correct nutrition and no health hazards, respectively. (8) Consider the following statements.  A - Use of cold chain to distribute fruits and vegetables may assure food security national level.  B - Practice of cold chain may extend the shelf-life of fruits and vegetables.  Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect. (3) A is incorrect and B is correct. (4) A is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the (1) wind. (2) rain. (3) insects. (4) frost. (5) direct su  11. The environmental parameter/s, which influence the soil genesis is/are (1) humidity. (2) temperature. (3) rainfall. (4) humidity and temperature. (5) rainfall and temperature.  12. Consider the following statements.  A - Seed dormancy would help seeds to overcome unfavourable conditions.  B - Scarification of passion fruit (Passiflora edulis) seeds helps removing seed do C - Mature viable crop seeds have a dormancy period of more than 2 weeks.  Of the above, the correct statement/s is/are (1) A only. (2) B only. (3) C only.	
(2) availability of adequate food and food with moderate health hazards, respectively. (3) accessibility for non-hazardous food and adequate food, respectively. (4) availability of nutritious food and its ability to safeguard human health, respectively. (5) availability of adequate food with correct nutrition and no health hazards, respectively. (6) availability of adequate food with correct nutrition and no health hazards, respectively. (7) A Use of cold chain to distribute fruits and vegetables may assure food security national level. (8) B - Practice of cold chain may extend the shelf-life of fruits and vegetables. (9) Of the above, (1) Both A and B are correct. (2) A is correct and B is incorrect. (3) A is incorrect and B is correct. (4) A is correct and B is correct. (5) B is correct and it is further explained by B. (5) B is correct and it is further explained by A.  10. A farmer transplanted chilli seedlings obtained from a nursery bed and covered them with leaves. The purpose of providing cover for the seedlings after transplanting is to protect the flowing. (4) A and B only.

(5) B and C only.

- 34. Improving the use-efficiency of agricultural inputs is one of the major ways to increase crop productivity. In this respect, select the most correct statement from the following.
  - (1) Triple super phosphate is an essential component of basal fertilizer in paddy cultivation in Sri Lanka.
  - (2) Application of the total requirement of Muriate of Potash as a basal dressing will increase the uptake of K<sub>2</sub>O by plants.
  - (3) Nitrogen losses from urea can be minimized by single application of the total nitrogen requirement of the crop as a top dressing.
  - Application of slow release fertilizer as a basal dressing will provide adequate nutrients to crops after flowering.
  - (5) Nano-technology can be effectively used to improve timely and continuous release of nutrients from fertilizer.
- 35. The hormone that is responsible for breaking dormancy in seeds is

Ethylene. (1)

(2) Gibberellins.

(4) Abscisic acid.

- (5) Indoleacetic acid.
- **36.** Select the correct statement from the following regarding plant tissue culture.
  - Formation of callus tissue is called organogenesis.
    - (2) Potato dextrose is the most suitable gelling agent.
    - (3) Mercuric bromide is used for surface sterilization of ex-plants.
    - (4) Proteolytic enzymes help production of protoplasts from the callus tissue.
    - Serum albumin is a basic component used in culture media.

- 37. Pre-emergence herbicides are used to
  - (1) destroy weed seedlings when they are at 2-3 leaf stage.
  - (2) kill above ground vegetative organs.
  - (3) control weeds in non-agricultural land.
  - (4) control weeds before planting the crop.
  - (5) control propagules of weeds found in soil.
- 38. The most effective preventive technique to control brown plant hopper attack in paddy is
  - (1) deep ploughing.

(2) continuous flooding.

- (3) repeated use of pesticides.
- (4) scattered planting of rice in the area.
- (5) increase seed paddy rates for planting.
- 39. Select the correct statement on pest and disease management of crops in Sri Lanka.
  - (1) Virus diseases are the most common category of crop diseases.
  - (2) Leaf curl disease is the most devastating disease of chilli.
  - (3) Copper sulphate is the most widely used fungicide.
  - (4) Soil sterilization in plant nursery controls majority of the insect pests of crops.
  - (5) Flooding is the most effective post-planting technique to control pests and diseases in rice.
- 40. The most important Personal Protection Equipment (PPE) to be used in pesticide application is
  - (1) reading the label.
  - (2) wearing gloves.
  - (3) using an appropriate spraying equipment.
  - (4) not to spray during strong winds.
  - (5) covering the whole body with suitable clothing.
- 41. The protected culture structure shown in the diagram having a polythene canopy and open sides is a
  - (1) greenhouse.
  - (2) Lath house.
  - (3) solar propagator.
  - (4) rain shelter.
  - (5) polytunnel.

- 42. One of the major limiting factors for using greenhouses for agricultural production in Sri Lanka is the
  - (1) strong wind.

- (2) high temperature.
- (3) high rainfall.

(4) high capital cost.

- (5) low humidity at night.
- 43. The correct procedure that should be followed to prepare Gerbera cut flowers, after harvesting and removing the woody basement part, for the export market is
  - 1) packing individual flowers vertically in shallow cardboard containers, dipping flower stems in 100 ppm silver nitrate solution and storage at 1°C.
  - (2) dipping flower stems in 100 ppm silver nitrate solution, packing individual flowers horizontally in shallow cardboard containers and storage at 1°C.
  - (3) dipping flower stems in 40 ppm sodium hypochlorite solution, packing individual flowers horizontally in shallow cardboard containers and storage at 1°C.
  - (4) dipping flower stems in 100 ppm silver nitrate solution, packing individual flowers horizontally in shallow cardboard containers and storage at 10°C.
  - (5) dipping flower stems in 100 ppm sodium hypochlorite solution, packing individual flowers vertically in shallow cardboard containers and storage at 1°C.

ALI	2020/16/E-I/(NEW/OCD)
44.	Consider the following statements which were described the best stage for harvesting roses as cut flowers.
	A - Open-bud stage when the colour is fully developed with 1-2 mature leaves.
	B - Tight-bud stage when the colour is fully developed with 1-2 mature leaves.
	C - Tight-bud stage when the colour is fully developed with 3-4 mature leaves.
	Of the above, the correct statement/s is/are
	(2) $(3)$ $(3)$ $(4)$
<b>.</b>	
<	(4) A and B only. (5) B and C only.
45.	One of the objectives of using border plants is
	(1) weed control. (2) to fill the free space.
	(3) to attract animals. (4) moisture conservation.
	(5) to cover unwanted views.
46.	The main nutrient found in maize seeds is
	(1) lipids. (2) fibre. (3) starch. (4) proteins. (5) vitamins.
477	Following are some statements on formulation of animal feeds.
4/.	A - Compared to broiler feeds, layer feeds should contain more calcium and less protein.
	B - Compared to milking cow feeds, heifer feeds should contain more protein and calcium.
	B - Compared to milking cow feeds, heller feeds should contain more protein and the broiler
	C - Among all poultry feeds, the highest protein content is found in feed given to broiler
	chicks.
	D - Pigments are usually added to all types of poultry feeds.
	Of the above, the correct statements are  (1) A and B only  (2) A and C only.  (3) B and C only.
	(1) A and D only.
	(4) B and D only. (5) C and D only.
48	. Candling during incubation is carried out
10	(1) to observe the position of the embryo.
	(2) for sexing of chicks.
	(5) to remove the unsuitable eggs from the incubator.
49	Following statements are on artificial insemination of cattle.
	A - Transmission of sexual diseases will be reduced due to artificial insemination.
	B - The objective of semen dilution is to preserve semen for future use.
	C - Sperm concentration of semen can be estimated by visual test.
	Of the above,
	(1) Only A is correct. (2) Only B is correct. (3) Only C is correct.
	(4) Both A and B are correct. (5) Both B and C are correct.
	(T) Dom 11 and D are conteen.
50	). Of the following, select the most correct statement.
	(1) Fresh milk can be kept for about two weeks under refrigeration.

- (2) Milk is preserved to enhance its nutritional quality.
- (3) Sterilized milk can be kept for a longer period than pasteurized milk.
- (4) Pasteurized milk can be kept for a longer period than sterilized milk.
- (5) Both pasteurization and sterilization of milk could kill all micro-organisms in milk.

Three hours

අමතර කියවීම් කාලය - මිනිත්තු 10 යි ගෙහනුස வாசிப்பு நேரம் - 10 நிமிடங்கள் Additional Reading Time - 10 minutes

Use additional reading time to go through the question paper, select the questions you will answer and decide which of them you will prioritise.

Index No.:		•	
------------	--	---	--

#### **Instructions:**

- \* This question paper consists of 10 questions in 09 pages.
- \* This question paper comprises of Parts A, B and C.

The time allotted for all three parts is three hours.

## Part A - Structured Essay (02-08 pages)

- \* Answer all questions on this paper itself.
- \* Write your answers in the space provided for each question. Please note that the space provided is sufficient for your answers and extensive answers are **not** expected.

#### Part B and C - Essay : (page No. 09)

- \* Select two questions from each of the Parts B and C and answer four questions only. Use the papers supplied for this purpose.
- \* At the end of the time allotted for this paper, tie the **three** parts together so that Part A is on the top of Parts B and C before handing over to the supervisor.
- \* You are permitted to remove only Parts B and C of the question paper from the Examination Hall.

#### For Examiner's Use only

### Essay

\* Select two questions from each of the Parts B and C and answer four questions only.

(Each question carries 150 marks.)

#### Part B

1. (i) Explain the following statement, with examples.

"Soft technology is always simple and cost-effective."

- (ii) Describe the impact of wind and humidity on the agricultural production in Sri Lanka.
- (iii) Describe how different plant parts are processed to make medicinal products giving appropriate examples.
- 2. (i) Explain the important activities in relation to proper management of a business.
  - (ii) Describe the risk of using chemical disinfectants at home to sanitize fresh fruits and vegetables giving appropriate examples.
  - (iii) Explain the importance of propagation by seeds in food crop production.
- 3. (i) Describe the importance of food processing in achieving national level food security.
  - (ii) Explain how the fishery industry contributes to the pollution of aquatic ecosystems.
  - (iii) Explain the following statement.

"Use of some of the modern biotechnological techniques increases the need for preservation of genetic resources."

#### Part C

- 4. (i) Giving two examples, describe the advantages of using appropriate technology in Sri Lankan agriculture.
  - (ii) Write the important components of main garden types in landscape architecture.
  - (iii) Describe the main steps involved in making good quality grass silage.
- 5. (i) Describe various methods of preservation of milk by sterilization.
  - (ii) Explain why pesticides have become popular for pest control in agriculture.
  - (iii) Describe the factors to be considered in application of chemical fertilizer for a newly established brinjal crop in the Dry zone.
- 6. (i) Describe the purposes of using misters in protected culture.
  - (ii) Explain the correct procedure for preparing a growth medium for establishing Gerbera as a cut flower crop for the export market.
  - (iii) Compare the advantages and disadvantages of artificial incubation and natural incubation of eggs.
